

Video management for hospital environment.

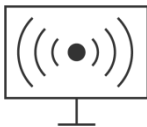

Display

Control **the display of your patient's data** as well as **audio, video and DICOM streams** in the operating room (ultrasound scanners, endoscopes, image intensifiers, microscopes...).

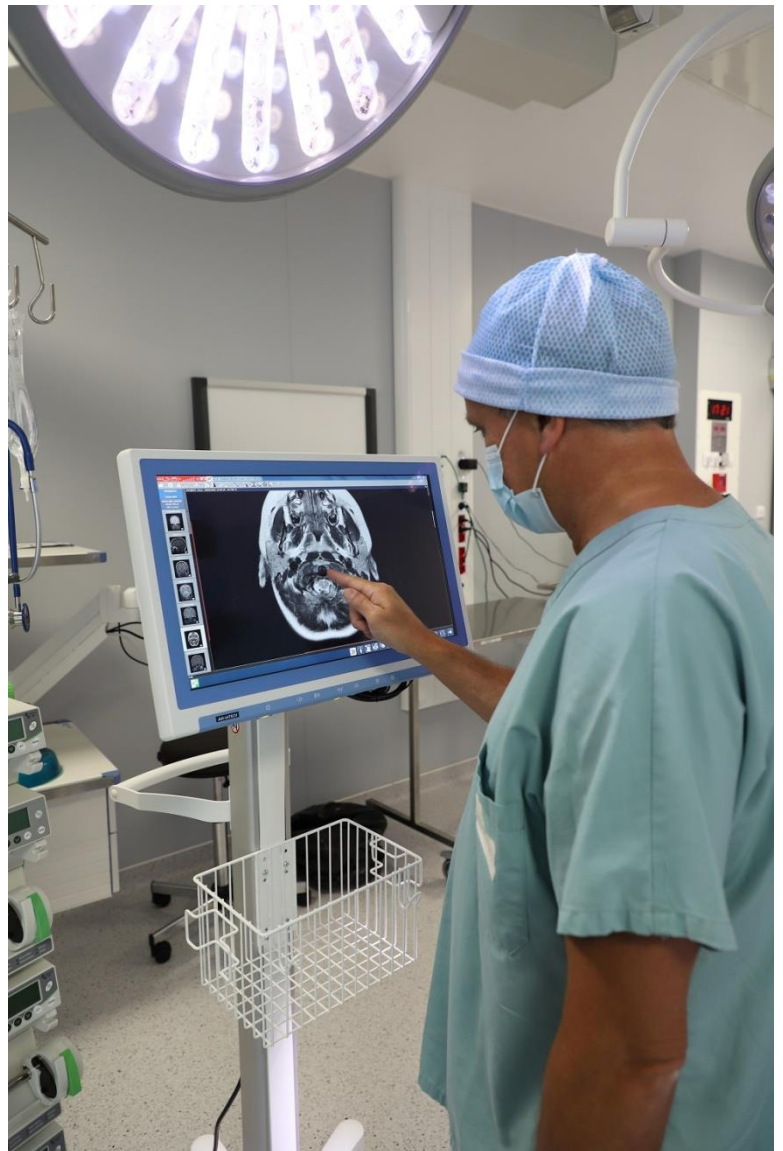

Storage

Take photos and videos of your surgical procedures and **record them in the DICOM format** directly **on the PACS**, on a **local server** or the **network**.

Communication

Share data **on streaming** or **on videoconference** with remote surgeons and medical staff through the network.

SurgiMedia® Autonomes

**Acquire. Share.
Stock. Display.**

Your all-in-one video management solution without structural modification.

DistriVIEW

**The right information,
at the right place and
the right moment.**

Create video management systems for your surgical and medical environments

MultiVIEW

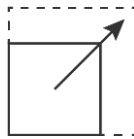

**All the information
gathered at the same
place.**

Multimedia solution for your hybrid rooms.

Intuitive and touch interface

User-friendly, the SurgiMedia DistriVIEW solution is equipped with **touch screens** and easy to use **icons** for a greater comfort.

Customizable and evolutionary

We **configure the SurgiMedia according to your needs** (number of inputs/outputs, audio-video-DICOM options, functions...) Because your actual needs may not be the same as your future ones, our **SurgiMedia solutions are designed to be evolutionary and adaptive** in order to guarantee longevity for your surgical suites.

Medical Devices

The SurgiMedia are CE marked in order to address **security and hygiene expectancies** of your **medical environment** and ensure their compatibility with other equipment which they are connected to.

Since 2001

Founded in 2001, ISIS S.A.S is a French company **located in the heart of the Alps**, bringing together **a team of experts** from the operating room experienced in the **most complex technologies**.

Its ambition : **bring a video management custom-made solution adapted to each hospital environment**.

From the very beginning, ISIS led many projects with the DGA* on **Surgical Remote Assistance** trials with military satellite encrypted connections.

Meanwhile, the firm encounters its first technological success with **its famous neurosurgical robot, the SurgiScope**. After 7 years of work on this unique device, the team of engineers then joined forces around a **new challenge, SurgiMedia**, a digital multimedia station **which success was immediate**.

*DGA stands for Direction Générale de l'Armement.

Designed and produced in the heart of the Alps

ISIS designs, pieces together and produces its digital solutions in Grenoble. The **full control** over its solutions and the **company's human size** allows it to **anticipate and adapt** the supply quickly to your **specific technical and ergonomic demands**. In a nutshell, it enables the firm to warranty a **good return on investment** for its clients.

Support

Have you heard of **ISIS's added value**? **Advising and support** throughout the entire project, from the **identification of your need** to the **evolution of your solution**.

Strongly experienced, **ISIS's teams will guide you** through the broad range of our solutions, in order to **choose the most adapted one**. They configure it so it perfectly answers your needs.

During the SurgiMedia installation, **ISIS supervises and coordinates project teams** so that your solution is ideally integrated in your operating room.

Once installed, **ISIS teams will train your clinical teams** to ensure the good handle of the machine. Moreover, **ISIS will support your biomedical and technical staff** in the maintenance of the products.

In order to ensure a **good daily functioning** of your SurgiMedia, **extensions of warranty** and various **maintenance contracts** exist. In a sharing mode or total one, **you choose what suits you best**.

Because your actual needs may not be the same as your future ones, **ISIS can upgrade your machine any time**.

Traditional technology

ISIS offers in its DistriVIEW product line the possibility to **use matrix SDI technology (16x16)** for video signals obtainable up to Full HD. It is an **easy to handle technology** and **economically profitable** without any compromise to the quality.

IP Technology

ISIS also develops its solutions with an **IP SDVoE 10Gb technology to warranty a 4K display** of video signals without any compression nor delay on an **optical fiber network**. This technology offers **great versatility** and an **evolutivity without limits**.

More than **450 rooms** were already equipped in more than **10 different countries**. In **public** or **private** institutions, **every specializations** included . ▼
